

How Far??

If you start anywhere on the globe and go directly north (up towards the North Pole), you will reach a point at the top where if you continue traveling in the same direction, you will be traveling south. It works the same way if you start out going directly south. When you reach the South Pole, you would have switched to north if you keep going. However, if you pick a starting location and go directly east, you will always be going east. If you go west from a point, you will go west the whole time all the way around. There is no place where east turns into west, or west to east. The two directions never touch again. Perhaps this could help us understand *how far...*

"as far as the east is from the west, so far has he removed our transgressions from us." Psalm 103:12

God does big things and goes long distances for us. When He forgives, He goes all out. *How far* will we go for Him?
